DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 6 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Kukes et al. (US 5,151,172).

The reference teaches in claims 1, 5 and 6 a process for the hydrogenation of hydrocarbons in the presence of sulfur, comprising a supported catalyst comprising palladium and platinum in a weight ratio range of 5:1 to 1:2 and a quantity of 0.1 to 2% of each component. The claimed ratio of 2.5:1 to 3.5:1 amounts to approximately one-fifth of the range disclosed in the reference, and the claimed mass quantities are substantially coextensive with those disclosed in the reference; therefore, the claims are anticipated because one of ordinary skill in the art would immediately envisage the claimed ranges from those disclosed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1713

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kukes et al. (US 5,151,172) in view of Azuma et al. (US 4,540,480).

The parent claim is discussed with respect to Kukes above. Missing from Kukes is a disclosure to use the disclosed hydrogenation catalyst with petroleum resin. However, as shown in Azuma, the use of catalysts comprising supported Pt/Pd catalysts for the hydrogenation of such resins is well known in the art, and therefore one of ordinary skill in the art would be motivated to use the catalyst of Kukes for the hydrogenation of petroleum resins. Reasonable success would be expected, including hydrogenation of resins comprising sulfur, because both Azuma and Kukes have disclosed that such catalysts are effective in the presence of sulfur (Azuma col. 2, lines 40-64; Kukes claim 6).
